Product Specification

Engine

- Model: Cummins QSL9-C325 Diesel engine;
- Type: 4-stroke, water-cooled, vertical in-line 6 cylinders, direct injection, turbo-charger, intercooler, complied with European Off-highway Stage V Emission Standard and US EPA Tier F4(f) Emission Standard;
- Displacement: 543 in³ (8.9L);
- Max. Rated Power: 325 HP/1800rpm;
- Max. Torque: 1,126 ft-lb/1400rpm;
- Starter: 24V-8 HP;
- Radiator: fin type aluminum plate core;
- Air cleaner: Dry type system with main filter element, safety element and resistance indicator;
- Throttle: Electrically controlled hand and foot throttle;
- Fuel filter: Replaceable paper element;
- Batteries: Two 12V×180Ah capacity batteries, connected in series (24V system);
- Fuel tank capacity: 105.7Gal (400L).

Hydraulic System

- Main pumps: Three variable displacement piston pumps provide power for the main machine functions;
- Gear Pumps: Two gear pumps provide power for radiator and control circuit;
- Control: Electrically controlled positive hydraulic flow control allows for safe and precise multifunction operation;
- Oil Cooler: Fan cooled heat exchanger provides multi stage hydraulic oil cooling;
- Filter: Peak flow, high efficiency filter with bypass valve and replacement filter indicator. Indicator will remind user when its time to replace filter;
- Max. pressure of system: 4,641 psi;
- Main/aux. hoist and travel system: 4,641 psi;
- Swing system: 4,641 psi;
- Control system: 725 psi;
- Hydraulic Tank Capacity: 121.5Gal (460L).

Electrical Control System

- Self developed SYIC II control system is highly integrated to provide safe, precise, and reliable operation;
- Control system consists of power system, engine system, main control system, LMI system, auxiliary system and safety monitoring system. CAN BUS is used for data communication between controller, monitor and the engine;

- The in cab monitor display the status and working parameters for engine speed fuel level, engine oil pressure, pilot pressure, engine hours, boom configuration, hook radius, hook height, boom angle, wind speed, load on hook, and safety warnings.

Main and Aux. Hoist Winch

- Main and aux. hoist winches are driven separately by a variable speed hydraulic motor and gearbox. Single axis control handles allow for power up/down and free fall winch operations. Fine inching control is standard and allows for precise operation;
- Winch drum laggings are grooved for multilayer spooling;
- **Main hoist/Aux. hoist with free fall function:**

Main hoisting winch	Drum diameter	22.68in (576mm)
	Rope speed (1st layer)	0~397.0ft/min (0~121m/min)
	Wire rope diameter	1.02in (26mm)
	Main hoist wire rope length	984' (300m)
	Rated single line pull	26.5Klb (12t)
Aux. hoisting winch	Drum diameter	22.68in (576mm)
	Rope speed (1st layer)	0~397.0ft/min (0~121m/min)
	Wire rope diameter	1.02in (26mm)
	Aux. hoist wire rope length	853' (260m)
	Rated single line pull	26.5Klb (12t)

- **Main hoist/Aux. hoist without free fall function:**

Main hoisting winch	Drum diameter	24.80in (630mm)
	Rope speed (1st layer)	0~397.0ft/min (0~121m/min)
	Wire rope diameter	1.02in (26mm)
	Main hoist wire rope length	984' (300m)
	Rated single line pull	26.5Klb (12t)
Aux. hoisting winch	Drum diameter	24.80in (630mm)
	Rope speed (1st layer)	0~397.0ft/min (0~121m/min)
	Wire rope diameter	1.02in (26mm)
	Aux. hoist wire rope length	853' (260m)
	Rated single line pull	26.5Klb (12t)

Product Specification

Boom Hoist Winch

- Boom hoist winch is driven directly by a variable speed hydraulic motor and gearbox. Single axis control handle allows for boom up/down operations;
- Spring loaded brake is hydraulic released;
- Winch drum laggings are grooved for multilayer spooling.

Boom hoist winch	Drum diameter	16.54 in (420mm)
	Rope speed (1st layer)	0~147.6ft/min (0~45m/min)
	Diameter of wire rope	0.79 in (20mm)
	Boom hoist wire rope length	623.3' (190m)

Swing Mechanism

- Swing Brake: Spring applied wet brake that is normally closed, providing controlled smooth braking;
- Swing system has three work modes to accommodate different needs: auto brake mode, free swinging mode, and fine inching mode;
- Swing drive: external engaged swing drive with 360° swing range, max. swing speed is 2.2 rpm;
- Swing bearing: three-row roller bearing.

Cab and Control

- Operators cab has a hinged lockable door and large windows providing excellent line of sight. The cab tilts up 20° providing the operator a panorama view and reducing fatigue. The cab and control layout allow for ergonomic operation keeping the operator comfortable;
- Monitor: 10.4 touch screen with simple user friendly interface;
- Armrest Console: Control handles electrical switches, emergency stop, and ignition switch are located on the left and right. Arm console can be adjusted independent of the seat;
- Seat: Multi-way adjustable floating seat;
- HVAC: Powerful air conditioner and heater with optimized vent locations;
- Cameras: Multiple cameras can be displayed on the monitor at the same time. This provides the operator with a real time view of winches, right side of machine, rear of machine, and view from boom tip;
- Single axis controls for travel, main, aux, and boom hoist winches. Dual axis controls for swing and 3rd drum operation.

Counterweight

- Counterweight tray and blocks nest together for easy assembly, disassembly and transportation;
- Rear counterweight: total weight 119.0Klb (54mt), 11.6Klb (5.25mt) counterweight blocks x 8, 26.5Klb (12mt) counterweight tray x1;
- Carbody counterweight: A total of 2, total weight of 44.1Klb (20mt) [22.05Klb*2 (10t x 2)];

Upperworks

- High-strength steel welded frame. Design allows for easy maintenance and service.

Product Specification

Crawler Assembly

- Each side frame is equipped with an independent travel driving motor. The variable speed travel system is configured with speed options to meet various requirements: low speed provides max tractive effort, while high speed provides fast job site transfer.

Crawler Tensioning

- Crawler tensioning can be adjustable with hydraulic jack and shimming the guide wheel.

Track Pad

- Manufactured by advance casting techniques and materials providing high strength and excellent wear resistance;
- 37.4in (950mm) wide and each side frame has 64 track pads.

Jack Cylinder

- Standard jack cylinders make jobsite transport easier.

Operating Equipment

- All chords are high-strength steel tubes, and the boom/jib head sheaves are made of high-strength anti-wearing Nylon material protecting wire rope. The hook blocks have grooved steel sheaves.

Boom

- Lattice structure with high-strength steel chords. Each section is pinned together with pins;
- The length of the boom ranges from that (52.5ft/16m) of the basic boom to the maximum length (249.3ft/76m) and it can be incrementally changed by 9.8ft (3m).

Fixed Jib

- Lattice structure with high-strength steel chords. Each section is pinned together with pins;
- The length of the fixed jib ranges from that (42.7ft/13m) of the basic jib to the maximum length (101.7ft/31m) and it can be incrementally changed by 9.8ft (3m).;
- Longest boom + fixed jib: 200.1ft (61m) + 101.7ft (31m).

Luffing jib

- Lattice structure with high-strength steel chords. Each section is pinned together with pins;
- The length of the luffing jib ranges from that (72.2ft/22m) of the basic jib to the maximum length (170.6ft/52m) and it can be incrementally changed by 9.8ft (3m).
- Longest boom +luffing jib 160.8ft (49m)+170.6ft (52m).

Auxiliary Tip Extension

- Is a welded structure with one sheave that is connected to the main boom with with pins. It is used for aux. hook operations;
- Length of auxiliary tip extension: 8.9ft (2.7m).

Hook Block

- 150 UST hook, 5 sheaves;
- 88 UST hook, 3 sheaves;
- 39 UST hook, 1 sheave;
- 15 UST ball hook.

Safety Device

Assembly/Work Mode Control Switch

- In assembly mode, some of the safety devices are bypassed for helping crane assembly, for example, jib lower limit, boom angle limit and overload;
- In work mode, all safety devices are active.

Emergency Stop

- When this button is pressed down power supply to whole machine is cut off and all actions are stopped.

Load Moment Indicator (LMI)

- The proprietary load moment indicator is independently -developed by Sany, which is a specially designed over-load protective system for SCA series crawler crane, with performance structural parameters of all series of crawler cranes directly stored inside, such as bearing curve, boom and jib weight, center of gravity, and other geometrical parameters. This system maximizes the utilization efficiency of the crane while guaranteeing the lifting safety;
- The independent safety control system fully controlled by computer, the LMI can automatically detect the load weight, work radius, and boom angle, compare rated capacity with actual load, actual radius and actual boom angle. In normal operation, the LMI can intelligently determine and cut off the crane from dangerous operation. It also has a black box function and record overload information;
- LMI consists of a 10.1in large colorful display, computer, angle sensors, load sensors and pressure sensors.

Over-hoist Limit Switch of Main/Auxiliary Hooks (Anti Two Block)

- It is used to prevent the over-hoist of the hook. When the lifting hook is raised to a certain height, the limit switch will be activated, and hook hoisting will be automatically cut off by the control system.
- Warning will be displayed in monitor and alarm will sound. At this moment, only hook lowering is allowed to prevent over-hoist action.

Over-release Limit Switch of Main/Auxiliary Hooks (Third Wrap Indicator)

- It is used to prevent the wire rope over-release. When the wire rope is released to the last three wraps, the limit switch will activate, and the releasing of rope will be automatically stopped by the control system. Warning will be displayed in monitor and alarm will sound. At this moment, only rope retraction is allowed to prevent over release action.

Function Lock Lever

- If the function lock level is not in work position, all the other handles won't work, which prevents any mis-operation caused by control handle movement.

Boom Hoist Drum Lock

- Pawl lock is used on boom hoist winch, which needs to unlock by switch before operation, in order to prevent mis-operation of handles and ensure safety during nonwork time.

House Lock Device

- House Lock can lock the machine at four positions, front, back, left and right.

Boom Limit Device

- When the boom angle exceeds 85° or jib angle exceeds 75°, corresponding limit switch will be triggered, and the control system will automatically cut off the boom hoisting. Warning will be displayed in monitor and alarm will sound. At this moment, boom/jib luffing winch won't hoist but it can still lower down.
- When the boom angle is less than 30° or jib down angle is less than 15°, the control system will automatically cut off the boom/jib from further lowering. Warning will be displayed in monitor and alarm will sound. At this moment, boom/jib luffing winch won't be able to lower. This protection is automatically controlled by Load Moment Indicator.

Back-stop Device

- Its major components are nesting tubes and spring, in order to buffer the boom and prevent boom overhaul.

Boom Angle Indicator

- Pendulum angle indicator is fixed on the side of boom base close to the cab, so as to provide convenience to the operator.

Hook Latch

- The hook is provided with a baffle to prevent wire rope from falling off.

Safety Device

Zoom Camera

- It can monitor load lifting on the main hook and the surroundings in real time. The camera can zoom in/out as needed.
- Components: wireless remote transmitter, wireless remote receiver, zoom camera.

Tri-color Load Indicator

- The load indication light has three colors, green, yellow and red, and the real time load status is presented on the display. When the actual load is smaller than 90% of rated load, the green light is on;
- When the actual load is larger than 90% and smaller than 100%, the yellow light is on, the alarm light flashes and sends out intermittent sirens;
- When the actual load reaches 100% of rated load, the red light is on, the alarm light flashes and sends out continuous sirens;
- When the actual load reaches 102% of rated load, the system will automatically cut off the crane operation.

Audio-visual Alarm

- Lights flash when the engine is running. During travel and swinging and audible alarm is sounded.

Swing Indicator Light

- The swing indicator light flashes during traveling or swing.

Illuminating Light

- The machine is equipped with the low beam light and high beam light at the front of the cab, illumination light in cab, and other lights for night operation, boom lights to improve the visibility during operation.

Rear View Mirror

- It is installed on the left of the operator's cab for monitoring the rear part of the machine.

Pharos (Aircraft Warning Light)

- Light mounted on the top of boom/jib that flashes at night.

Anemometer

- It is mounted on the top of boom/jib, and displays the wind speed on the monitor in the cab.

Electronic Level Indicator

- It displays the tipping angle of crane on the monitor in real time, protecting the machine from dangerous situation.

Seat Interlock

- If the function lever lock is lowered on the left side of cab seat or if the operator leaves the seat, all control levers will be deactivated to prevent any mis-operation due to accidental control handle movement.

Engine Power Limit Load Adjustment and Stalling Protection

- The controller monitors the engine power to prevent engine stalling.

Engine Status Monitoring

- The engine parameters will be displayed in the monitor, such as engine coolant temperature, fuel level, total engine hours, engine oil pressure, engine speed, battery, voltage.

9m luffing jib insert

×3

Length (L)	29.9ft (9.1m)
Width (W)	4.6ft (1.4m)
Height (H)	5.2ft (1.6m)
Weight	1.5Klb (0.7mt)

Boom top (special for L)

×1

Length (L)	18.7ft (5.7m)
Width (W)	6.4ft (1.95m)
Height (H)	9.2ft (2.8m)
Weight	4.2Klb (1.9mt)

Transportation Dimensions

Carbody counterweight

×2

Length (L)	13.9ft (4.25m)
Width (W)	4.9ft (1.5m)
Height (H)	1.8ft (0.55m)
Weight	22.0Klb (10t)

Rear counterweight tray

×1

Length (L)	19.0ft (5.8m)
Width (W)	7.6ft (2.31m)
Height (H)	1.6ft (0.5m)
Weight	26.5Klb (12mt)

Rear counterweight

(1+1)×4

Length (L)	6.3ft (1.93m)
Width (W)	7.5ft (2.28m)
Height (H)	2.0ft (0.6m)
Weight	11.6Klb (5.25mt)

150 UST lifting hook

×1

Length (L)	7.5ft (2.28m)
Width (W)	3.0ft (0.91m)
Height (H)	2.3ft (0.69m)
Weight	4.5Klb (2.04mt)

88 UST lifting hook

×1

Length (L)	7.3ft (2.21m)
Width (W)	3.0ft (0.91m)
Height (H)	2.0ft (0.62m)
Weight	4.3Klb (1.94mt)

39 UST lifting hook

×1

Length (L)	6.2ft (1.88m)
Width (W)	3.0ft (0.91m)
Height (H)	1.5ft (0.46m)
Weight	2.6Klb (1.2mt)

Transportation Dimensions

15 UST ball hook

×1

Length (L)	3.1ft (0.95m)
Width (W)	1.4ft (0.43m)
Height (H)	1.4ft (0.43m)
Weight	1.0Klb (0.45mt)

Remarks:

1. The transport dimensions for the parts are for reference that do not draw to the scale. The dimensions listed above are designed values excluding packing.
2. Weight is design values. It maybe different due to manufacturing tolerances.

H Working Radius

Unit:klb

H Load Chart

Note:

1. The rated load in the load chart is calculated complying with ASME B30.5;
2. The working radius is the horizontal distance from the load center to the swing center;
3. The actual lifting capacity must subtract the weight of hooks and other riggings from the rated capacity in the load chart.
4. The load value is calculated when the object is hung freely,without considering the influence of wind on the load, ground conditions and slope, operation speed and the influence of any other negative factors over safe operation. Therefore, the operator bears the responsibility of making a judgement and decreasing the load and lowering speed.
5. All ratings are calculated when the machine is parking on firm and level ground with less than 1% gradient.
6. See the Operation Manual for the complete load charts of HcM and HcA configurations.

FJ Working Radius

FJ Load Chart

Note:

1. The rated load in the load chart is calculated complying with ASME B30.5.
2. The working radius is the horizontal distance from the load center to the swing center.
3. The actual lifting capacity must subtract the weight of hooks and other riggings from the rated capacity in the load chart.
4. The load value is calculated when the object is hung freely, without considering the influence of wind on the load, ground conditions and slope, operation speed and the influence of any other negative factors over safe operation. Therefore, the operator bears the responsibility of making a judgement and decreasing the load and lowering speed.
5. All ratings are calculated when the machine is parking on firm and level ground with less than 1% gradient.
6. When the jib length is 42.7ft (13m), 1 part of line shall not be permitted.
7. See the Operation Manual for the complete load charts of FJ, FJm and FJa configurations.

LJ Configuration

Note: The boom combinations with "★" are recommended configurations.

LJ Configuration:
160.8ft+170.6ft (49m+52m)

LJ Working Radius

LJ Load Chart

Note:

1. The rated load in the load chart is calculated complying with ASME B30.5;
2. The working radius is the horizontal distance from the load center to the swing center;
3. The actual lifting capacity must subtract the weight of hooks and other riggings from the rated capacity in the load chart.
4. The load value is calculated when the object is hung freely,without considering the influence of wind on the load, ground conditions and slope, operation speed and the influence of any other negative factors over safe operation. Therefore, the operator bears the responsibility of making a judgement and decreasing the load and lowering speed.
5. All ratings are calculated when the machine is parking on firm and level ground with less than 1% gradient.
6. See the Operation Manual for the complete load charts of LJ and LJa configurations.

Service

When we say that SANY machines are built to endure, we're really talking about service. SANY equipment is intentionally designed to be easily and efficiently serviced, with features such as wide compartment doors and easy access to make maintenance more efficient. Because ease of service means back in service.

We've Got Your Back

To provide peace of mind and ensure maximum uptime, all SANY cranes are backed by a robust 3-year/3,000-hour standard warranty. That's our commitment to keeping your fleet running at peak performance.
